**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 4 and 8-16 allowed.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 19 and 20 rejected under 35 U.S.C. 103(a) as being unpatentable over Xu et al. (2002/0006586) in view of Chandross et al. (3,993,485) further in view of Mizuno (6,350,945)

Regarding Claims 19 and 20, Xu et al. disclose optical devices made from radiation curable fluorinated compositions where in Claims 29 and 31, it is disclosed a process for providing an optical signal and passing the optical signal through polymer resin. Xu et al. fail to disclose the diffracting of the optical resin to form an optical radiation pattern and the required sawtooth diffractive grating integrated into the encapsulant/resin. However, Chandross et al. disclose photopolymerization process and related devices where in claims 1 and 2 the required optical pattern pattern is disclosed. Furthermore, Mizuno discloses a thin film semiconductor device and method of manufacturing the same where in Fig. 2, sawtooth diffractive grating is integrated into optical resin/encapsulant 16.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required optical radiation pattern and the required

sawtooth diffractive grating integrated into encapsulant/resin in Xu et al. as taught by Chandross et al. and Mizuno, respectively, in order to manufacture a light emitting device with increased performance.
